

## Quiz 6

**Question 1** (15 points; 3 points each). Decide if each of the following are true or false and provide a justification or counterexample in each case. A justification could consist of a theorem from the text. All vector spaces are assumed to be finite-dimensional here. All vector spaces are now over  $\mathbb{C}$  unless otherwise stated.

- (a) \_\_\_\_\_ If the characteristic polynomial of a  $4 \times 4$  matrix is  $p(t) = (t - 1)^2 t^2$ , then there is an invertible matrix  $S$  so that  $A = SDS^{-1}$  where

$$D = \text{diag}(1, 1, 0, 0) = \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix}$$

- (b) \_\_\_\_\_ If  $A$  and  $B$  are  $n \times n$  matrices and  $\lambda_A$  and  $\lambda_B$  are eigenvalues for  $A$  and  $B$  respectively with respect to the same eigenvector  $\mathbf{v}$ , then  $AB\mathbf{v} = BA\mathbf{v}$ .

(c) \_\_\_\_\_ If  $A$  and  $B$  are  $n \times n$  matrices and  $\lambda_A$  is an eigenvalue of  $A$  and  $\lambda_B$  is an eigenvalue of  $B$ , then  $\lambda_A \lambda_B$  is an eigenvalue of  $AB$ .

(d) \_\_\_\_\_ If  $A$  and  $B$  are diagonalizable  $n \times n$  matrices, then  $AB$  is diagonalizable.

- (e) \_\_\_\_\_ Suppose  $A$  is diagonalizable, then  $e^A$  is diagonalizable and  $e^\lambda$  is an eigenvalue of  $e^A$  iff  $\lambda$  is an eigenvalue of  $A$ .

**Question 2** (5 points). Let  $A = \begin{bmatrix} 0 & 0 & 2 \\ 0 & 3 & 0 \\ 2 & 0 & 0 \end{bmatrix}$ , write  $A = U\Lambda U^{-1}$  where  $U$  is unitary, columns are orthonormal basis for  $\mathbb{R}^3$  and  $\Lambda = \begin{bmatrix} \lambda_1 & 0 & 0 \\ 0 & \lambda_2 & 0 \\ 0 & 0 & \lambda_3 \end{bmatrix}$  with  $\lambda_1 > \lambda_2 > \lambda_3$ .

Recall:  $U^{-1} = U^T$  for unitary  $U$ .

**Question 3** (5 points). Suppose the matrix  $A = \frac{1}{12} \begin{bmatrix} 5 & -1 \\ -1 & 5 \end{bmatrix}$  is used to transform points in the plane iteratively. That is, given a point  $\mathbf{v}$ , consider the sequence  $\mathbf{v}_n = A^n \mathbf{v}$ . Letting  $U = [\mathbf{u}_1 \quad \mathbf{u}_2]$  so that  $\mathbf{u}_i$  is an eigenvector associated to  $\lambda_i$  and letting  $\mathbf{v} = c_1 \mathbf{u}_1 + c_2 \mathbf{u}_2$  what is a simple expressions for  $a_n$  and  $b_n$  so that  $\mathbf{v}_n = A^n \mathbf{v} = a_n \mathbf{u}_1 + b_n \mathbf{u}_2$ .
