

## Quiz 3

**Problem 1** (20 points; 5 points each). Decide if each of the following are true or false and provide a small proof or counterexample in each case. All vector spaces are assumed to be finite-dimensional here.

- (a) \_\_\_\_\_ Given a basis  $\mathcal{B} = \{\mathbf{v}_1, \dots, \mathbf{v}_n\}$  for a vector space  $V$  and  $U$  a subspace of  $V$ , then there is  $\mathcal{C} \subseteq \mathcal{B}$  that is a basis for  $U$ .
- (b) \_\_\_\_\_ Given a basis  $\mathcal{C}$  for a subspace  $U$  of a vector space  $V$ ,  $\mathcal{C}$  can be extended to a basis  $\mathcal{B}$  for  $V$ .
- (c) \_\_\_\_\_ If  $\{\mathbf{v}_1, \dots, \mathbf{v}_n\}$  is linearly independent and  $\mathbf{v} \in \text{span}(\{\mathbf{v}_1, \dots, \mathbf{v}_n\})$ , then it is possible that there are distinct  $\mathbf{c}, \mathbf{b} \in \mathbb{R}^n$  such that  $\mathbf{v} = \sum_{i=1}^n c_i \mathbf{v}_i = \sum_{i=1}^n b_i \mathbf{v}_i$ .
- (d) \_\_\_\_\_ If  $\{\mathbf{v}_1, \dots, \mathbf{v}_n\}$  is linearly independent and  $V = \text{span}(\{\mathbf{v}_1, \dots, \mathbf{v}_n\}) = \text{span}(\{\mathbf{u}_1, \dots, \mathbf{u}_n\})$ , then  $\{\mathbf{u}_1, \dots, \mathbf{u}_n\}$  is linearly independent.

**Problem 2** (8 pts). Find a basis for  $\text{span}\{\mathbf{u}_1, \dots, \mathbf{u}_5\}$  from among the vectors  $\mathbf{u}_1, \dots, \mathbf{u}_5$ , where

$$\mathbf{u}_1 = \begin{bmatrix} 1 \\ 2 \\ 2 \end{bmatrix} \quad \mathbf{u}_2 = \begin{bmatrix} 2 \\ 5 \\ 4 \end{bmatrix} \quad \mathbf{u}_3 = \begin{bmatrix} 1 \\ 3 \\ 2 \end{bmatrix} \quad \mathbf{u}_4 = \begin{bmatrix} 2 \\ 7 \\ 4 \end{bmatrix} \quad \mathbf{u}_5 = \begin{bmatrix} 1 \\ 1 \\ 0 \end{bmatrix}$$

Make sure to show all work and explain your reasoning.

**Problem 3** (7 pts). Let  $c_1, c_2, \dots, c_n$  be  $n$  distinct real numbers. Let  $p_i = \prod_{\substack{j=1 \\ j \neq i}}^n (x - c_j) / (c_i - c_j)$ .

Show that  $\mathcal{B} = \{p_1, p_2, \dots, p_n\}$  is a basis for  $P_{n-1}$ .

Hint: Consider  $p_i(c_j)$ .
