Quiz 5

Problem 1 (15 points; 3 points each)**.** Decide if each of the following are true or false and provide a justification or counterexample in each case. A justification could consist of a theorem from the text. All vector spaces are assumed to be finite-dimensional here.

(a) ______ There is a unique least squares solution to $A\boldsymbol{x} = \boldsymbol{b}$.

(b) ______ There is a unique $\boldsymbol{y}$ so that $\|\boldsymbol{y} - \boldsymbol{b}\|$ is minimal and $A\boldsymbol{x} = \boldsymbol{y}$.

(c) ______ If $\{\boldsymbol{u}_1, \ldots, \boldsymbol{u}_n\}$ is an orthonormal basis for V with respect to an inner product $\langle \cdot, \cdot \rangle : V \times V \to \mathbb{C}$ and $\boldsymbol{v} = \sum_{i=1}^n \alpha_i \boldsymbol{u}_i$, then $\|\boldsymbol{v}\|_2^2 = \sum_{i=1}^n |\alpha_i|^2$.

(d) ______ All norms $\|\cdot\| : \mathbb{R}^n \to [0, \infty)$ on $\mathbb{R}^n$ come from an inner product.

(e) ______ If $\mathcal{C} = \{\boldsymbol{u}_1, \ldots, \boldsymbol{u}_n\}$ is an orthonormal basis for V with respect to an inner product $\langle \cdot, \cdot \rangle : V \times V \to \mathbb{C}$ and $\boldsymbol{v} \in V$, then for any $(c_1, \ldots, c_n) = [\boldsymbol{v}]_{\mathcal{C}}$, $c_i = \langle v, u_i \rangle$.

Problem 2 (10 points)**.** Using the inner product

$$\langle p, q\rangle = \int_0^1 pq\,dx$$

use Gram-Schmidt to find an orthonormal basis for $\mathbb{P}_2[x]$, the space of all polynomials of degree 2 or less.

Use this to find the projection, q, of $p = x^{2/3}$ onto $\mathbb{P}_2[x]$.
